

## PETITION

### **Request to obtain the right to have analog meter(s) at home/business place(s) and the right to not be subjected to radiofrequencies emitted by neighbouring meters**

Considering that the new generation meters, in collecting and transmitting personal data by wireless technology, are considered an intrusion of privacy and a target of choice for hackers;  
Considering that the Canadian guideline for radiofrequencies exposure limits on which Hydro-Quebec and the Energy board base their decision doesn't take into account the human biological, non-thermal effects of radiofrequencies; effects reported by citizens whose homes are equipped with first and second generation meters;  
Considering that measurements of high density peaks of radiofrequencies emitted by new generation meters were ignored by Hydro-Quebec who chose to disclose only much lower average density measurements;  
Considering that the new generation meters and first generation meters emit, at all times, radiofrequencies which are classified potentially carcinogen by the WHO;  
Considering that the emission of any contaminant, such as a radiation (transmission of electromagnetic waves), that presents a risk for human health and safety is prohibited by the Environment Quality Act;  
Considering that the Energy Board completely ignored the precautionary principle when public authorities must give precedence to health and safety issues when one can reasonably suppose that a given action threatens them;  
We, who sign this petition, therefore request from the National Assembly that a moratorium be placed on the wireless meters program, the right for each citizen to keep or have back his analog meter(s) at his home/business place(s), at no additional cost, and the right to not be subjected to radiofrequencies emitted by neighbouring meters.
